

VBScript Append to Text File

Here is a quick code snippet, appending information to a text file. With this example we are making use of the Scripting.FileSystemObject class (http://www.w3schools.com/asp/asp_ref_filesystem.asp). To write to the text file we make use of the OpenTextFile(fname,mode,create,format) method.

The following parameters can be given to the OpenTextFile method:

- Fname – string - The name of the file to open
- [Mode] – int - mode to open the file
 - o 1 – For Reading
 - o 2 – For Writing
 - o 8 – For Appending
- [create] – bool – Should the file be created if missing
 - o True – Yes
 - o False – Default – No
- [format] – int – The format of the file
 - o 0 – ASCII
 - o -1 – Unicode
 - o -2 – System Default

```
Dim fso, filePointer, strFile
Const OPEN_FILE_APPENDING = 8

strFile = "./out.txt"
Set fso = CreateObject("Scripting.FileSystemObject")

'// Open file and append hello world to it
Set filePointer = fso.OpenTextFile(strFile, OPEN_FILE_APPENDING, TRUE)
filePointer.WriteLine("Hello World")
filePointer.Close

'// Remove the fso Object
Set fso = Nothing
```
