

# Server 2008 New SID

I am in the process of studying for my 70-640 exam and have run into issues with my cloned servers and their SIDs. I did some googling and found out that there is a way to change the SID of a server 2008 machine using the NewSID (although some people say that it should not work).

On the M\$ site there is no link to download the NewSID (they have removed it) so it can be found over here. <http://www.softpedia.com/get/System/System-Miscellaneous/NewSID.shtml>

I have tested this on a Server 2008 Full VM and it works perfectly.
