# Alert Maker (App + Source Code)

I always need to create fictitious alerts for testing new rules in SCOM. I used to use a VBScript to generate the alerts that I needed, but got sick of the command line interface that it needed.

So popping open VS2010 and +- 20 min of coding and testing **Alert Maker.exe** was created.

If you need to quickly generate an alert – I would recommend using this – just because I made it :).

If you are interested you can grab it (https://drive.google.com/file/d/0BwmLFltkLtlRRHdSUmt1Mk9DdmM/edit?usp=sharing), or the source code (https://drive.google.com/file/d/0BwmLFltkLtlRSkdhRUFsWWFZVXc/edit?usp=sharing).
